

Business Cloud PBX nfon. The centralized telephone system.

Calling in the cloud? Starting today, you don't need to invest in the hardware for a phone system (PBX) anymore. With Business Cloud PBX nfon from Sunrise, you can use the latest phone system (PBX) technology, call connections, and additional services with attractive conditions. The Business Cloud PBX solution always comprises three elements: the Business Cloud PBX system itself with its phone numbers and rate plan, the connection of the customer's location over the public network (Internet) and the integration of the Business Cloud PBX into the customer network. The entire range

of telephone system performance characteristics is already included in Business Cloud PBX. With the web portal (<https://home.cpbx.sunrise.ch>), you can configure it yourself quickly and simply at any time to fit your needs. You can add and remove terminals (for the temporary use of individual connections) and configure various standard and additional functions yourself. You decide yourself which services you need, and only pay for the services you actually use. With Business Cloud PBX, your phone system will become more flexible, more secure, more mobile and more cost-effective.

Sunrise
