M2M management.

Anytime, anywhere: Smart networking of all your hardware.

Communication between machines and hardware – without direct human intervention – allows companies to streamline processes. The number of communicating hardware units is constantly increasing and efficient M2M management will be taking on an important role in many companies in the future. Looking for flawless machine-to-machine networking that offers you an extensive overview of all your company's M2M activities?

With the customized M2M management from Business Sunrise you get a smart, comprehensive solution that combines all M2M connections in national as well as international networks on a single platform. You benefit from rate models adapted to meet your needs for communication between hardware and get to see all connection information related to your devices in real time, thus making it easier for you to optimize business processes or increase efficiency. Just install the SIM card and gain access to a world of modern M2M management.

Key features

- A single, comprehensive solution: Manage large quantities of M2M SIM cards yourself on a central platform that can be individually customized to meet your business needs.

- Better overview: Get an overview and use the M2M management platform to optimize your business processes.

- Security and reliability: Easily and securely connect machines from different manufacturers with different data sources.

- Reachable at any time: Connect your hardware in real time and you can check them even when you're on the go, using the convenient remote access. Our global roaming partners guarantee full reachability wherever you are.

- Comprehensive support: Benefit from twice as much expertise through our partnership with Telefónica, a leading provider of communications and innovative M2M solutions worldwide.

Your benefits at a glance

- The flexible full solution for all M2M connections in your company

- Optimal support provided by rate models customized to meet your every need

- Process and cost control made possible by the uniform display and processing of all M2M connections with the M2M management platform. You save on time and high investment costs.
