M2M management platform.
Leave the work to us – keep your focus on your company.

More and more companies are looking for a clear, efficient solution to integrate the growing number of wireless connected devices into existing corporate processes in a way that makes economic sense. What is needed is a smart solution that is transparent and needs-based, and that also automatically detects rule violations and potential savings. With the M2M management platform, Sunrise offers you the ideal solution for professional SIM administration and profit maximization: Its easy-to-use features make the M2M management platform a convenient administration and control tool for SIM cards and your M2M or IoT modules, allowing you to give your full attention to your business again.

Multiple features are integrated into the M2M management platform to help you manage your work even more efficiently. At any time, you can take a look at your company's SIM cards installed anywhere in the world, and manage them simply and professionally. Particularly in combination with the M2M management platform, our customized M2M offers are perfectly suited for any application in any industry. Sunrise offers you flexible rates and services that are specifically targeted at data communication between your machines.

Key features
- Reporting and monitoring: Get a real-time overview anywhere and any time on the consumed data volume of individual SIM cards during freely selectable time periods. Automatic export functions for your individual reports are also available to you.
- SIM card management: You can manage the individual assignment of your SIM cards, activate or deactivate them yourself, and configure individual parameters such as volume limits, rules or hardware connections yourself.
- Alarms and notifications: Automatically received notifications via e-mail or SMS regarding consumed data volume, limit and threshold violations, or other definable escalation messages.
- Rule engine and IMEI lock function: Set freely selectable rules and actions to limit each SIM card individually. You can also assign IMEI hardware numbers to individual SIM cards to prevent abuse.

Your benefits at a glance
• Applicable to any industry, scalable to any company size, and can be implemented for any M2M solution needed
• Increase productivity and higher efficiency with automated M2M processes
• Always stay up to date with worldwide control of all your SIM cards in real time
• Versatile and customized offers with variable durations and at individual prices, depending on the number of SIM cards
• Use a globally proven M2M management platform and have a global market presence thanks to our partnership with Telefonica Group
