

Business cloud PBX.

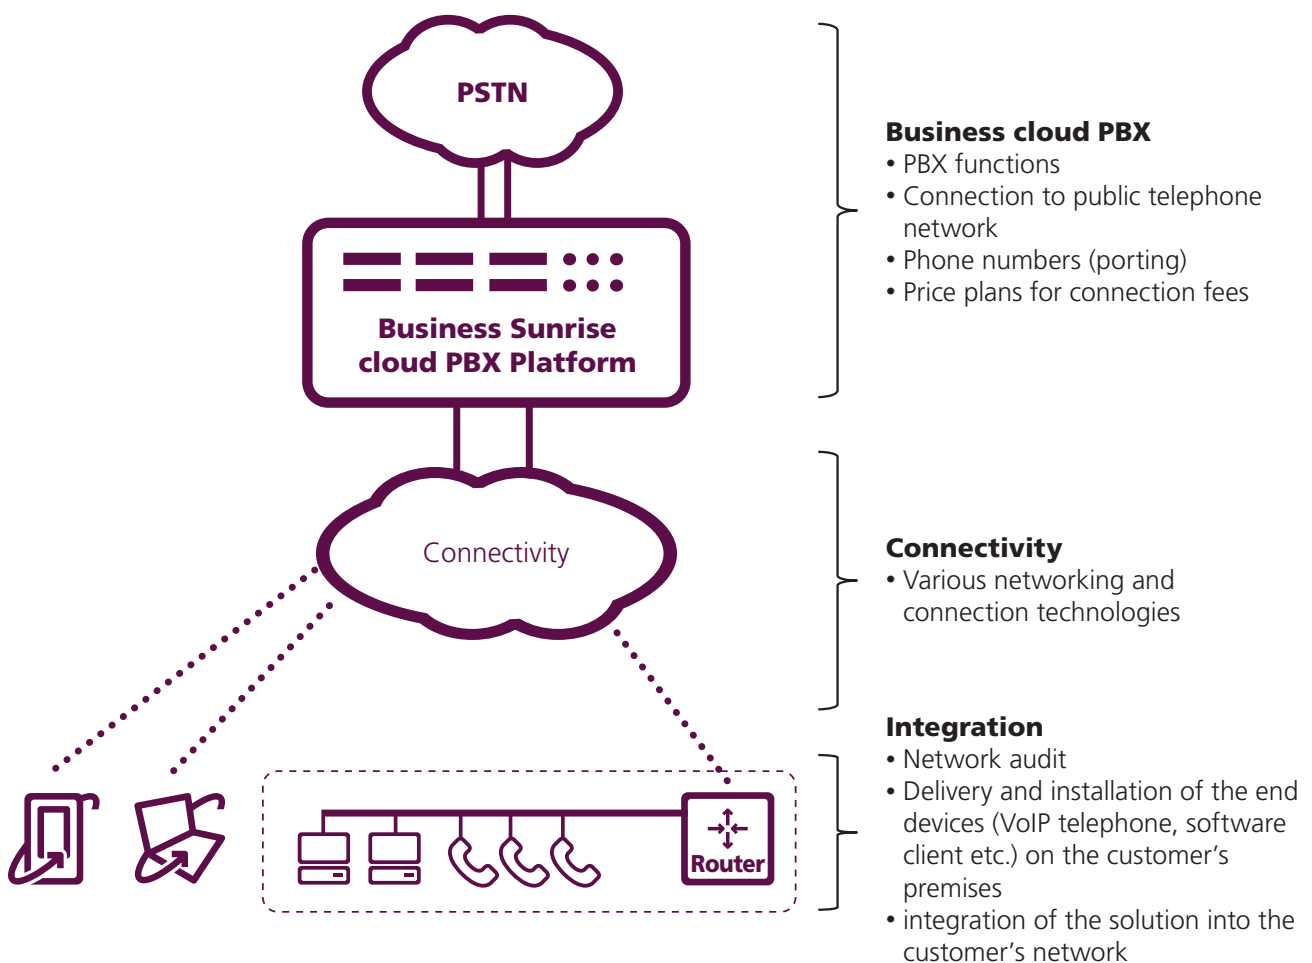

The centralized telephone exchange.

Calling through the cloud? Now you don't need to invest in PBX telephone exchange hardware. With Business cloud PBX from Business Sunrise, you can make use of state-of-the-art PBX telephone exchange technology, voice calling and supplementary services at attractive conditions.

The Business cloud PBX solution is always made up of three parts: The Business cloud PBX, which includes phone numbers and price plan, connectivity to the customer's location via the Internet, and integration of the Business cloud PBX into the customer's network.

The entire range of telephone exchange services is already part of the Business cloud PBX and can be configured by you to meet your needs quickly and easily via the web portal <https://serviceportal.vpbx.sunrise.ch>. For example, you can add and remove end devices (when using individual lines on a temporary basis) and configure various standard and additional functions yourself. You decide yourself which services you need and only pay for those services that you actually use.

With Business cloud PBX, your telephone exchange becomes more flexible, more secure, more mobile, more cost-effective.

Legend

PSTN Public Switched Telephone Network

Key features

More performance

- High-end telephony for businesses of all sizes
- As many incoming lines as you need
- Integrated mailbox for all subscribers with forwarding to an e-mail account
