Actual Internet speed depends on individual factors that are under the control of the customer or a third party, such as the capacity of the end device, type of connection in the residence, the building's structural characteristics, the distance to the next telephone switchboard, the quality of the connections or other factors and may be slower than the specified maximum Internet speed. Cumulative and simultaneous use by various end devices (e.g., TV, mobile & laptop) reduces the bandwidth available for each device.

## Miscellaneous

The transmission speeds specified represent optimum performance and cannot always be guaranteed. Where available we deliver 10 Gbit/s to your home over XGS-PON fiber connections. The overhead required to ensure transmission quality brings the effective individual download/upload speed to 8.2 Gbit/s. Simultaneous downloading and uploading may also limit the maximum upload speed to 5 Gbit/s due to hardware restrictions on the Sunrise Internet Box Fiber. Actual Internet speeds depend on various factors under the control of the customer or a third party, such as the end device capacity or type of connection at home.
